I've worked with Chandler in other classes and I know I can count on him to complete his tasks on time and stay involved in the project with feedback and discussions.

Guillermo completed his tasks on time and gave descriptions of what his scripts did during the project. He was involved with each discussion.

Similarly to Guillermo, Saul included comments and descriptions of his code while also being involved with every discussion. Saul also helped a ton with documenting all of our meetings and contributions.

During the first prototype of the project, Anthony was able to complete his tasks although the code did need some minor tweaking to get it to work. During the second half of the project however, he seemed to have run into issues and never completed or uploaded any of his work for prototype 2 leading to his tasks needing to be done by other members. There were also moments during the project where he went silent for a week.

Carlos helped a ton with the player coding and setup for the project along with all the control systems, an area I was new to. Could always rely on him to get any task done which needed to be done.
